AutoCAD commands, known as autocad commands in AutoCAD lingo, are the tools that you use to perform operations in your drawings. Commands are available through the menus, dialog boxes, and toolbars. In addition, you can also use the Quick Access toolbar or ribbon, to execute commands without going through the menus or toolbars. Commands are grouped into "layers," depending on

their functionality. You can add, delete, or update layers to adjust your document settings and customize it to suit your needs. By default, AutoCAD displays toolbars on the screen, but you can switch to a ribbon interface if you prefer. The ribbon is a collection of tools that let you quickly perform common drafting tasks, such as drawing, modifying, and annotating. You can also customize the ribbon with your own shortcuts and tools. The ribbon usually appears on the left side of the screen and is similar to a software menu. The ribbon is divided into four areas, which are typically associated with tool groups: Projects > Drafting Area > Drawing
