How to use the exe Select 'Autocad' from the 'User List' menu. Click 'Update'. Click 'Yes' to confirm. Both of these work for me. I am running Windows 10. A: Download the free edition here and skip the rest of the guide: Basically, you have to manually copy the 'rsd' (virtual registry-site) to the registry on your PC. Then you have to create a new virtual registry-site (the same name as the rsds and the rsds on the thumbdrive). You can then copy the 'rsd' from the thumbdrive to the new virtual registry-site and you'll be good. You'll have to create a new virtual registry-site because the Autocad site will keep overwriting your old one. A: So to export a dxf from a TeslaProDesigner view or a SubDict window, in my case, to an Autocad DXF, I opened AutoCAD and did the following: File -> Export -> DXF I saved it to a thumbdrive and then opened that in the AutoCAD installer Then in AutoCAD opened the file created in the previous step and "copy/paste" it to the new location in the 'paste' menu. The next step was to open up the file on the thumbdrive in TeslaProDesigner. Now you can open up the file in Autocad as described above (File -> Open...). This works just as well for a dxf from an Autocad DXF
